

ADHD Evaluation with Qb Test | Expert Diagnostic Services at Prodigy Psychiatric Group

Attention-Deficit/Hyperactivity Disorder (ADHD) affects individuals across all age groups, impacting focus, behavior, and daily functioning. At Prodigy Psychiatric Group, we offer comprehensive [ADHD Evaluation with Qb Test](#) combining advanced diagnostic tools with clinical expertise to provide accurate assessments and personalized care.

Understanding the QbTest

The QbTest is an FDA-cleared, evidence-based assessment tool designed to objectively measure the core symptoms of ADHD: inattention, hyperactivity, and impulsivity. It involves a 15-20 minute computer-based task where the individual's responses and movements are tracked with high precision. This data is then compared to normative data from individuals of the same age and sex who do not have ADHD, providing a comprehensive overview of the individual's symptom profile.

Benefits of the QbTest

- **Objective Measurement:** Unlike traditional assessments that rely heavily on subjective reports, the QbTest provides quantifiable data on attention and activity levels.
 - **Quick and Efficient:** The test is completed in a short time frame, allowing for prompt analysis and discussion of results.
 - **Monitoring Treatment Progress:** The QbTest can be administered multiple times to monitor the effectiveness of treatment interventions over time.
 - **Reduces Diagnostic Delays:** By providing clear, objective data, the QbTest can help reduce the time to diagnosis, allowing for earlier intervention.
-

Our Approach at Prodigy Psychiatric Group

At Prodigy Psychiatric Group, we integrate the QbTest into a comprehensive evaluation process. Our experienced clinicians combine the objective data from the QbTest with clinical interviews, behavioral assessments, and patient history to arrive at an accurate diagnosis. This holistic approach ensures that each patient receives a tailored treatment plan that addresses their unique needs.

Who Can Benefit from the QbTest?

- **Children and Adolescents:** Early identification of ADHD can lead to timely interventions, improving academic and social outcomes.
- **Adults:** Many adults live with undiagnosed ADHD. The QbTest can aid in identifying symptoms that may have been overlooked.
- **Individuals Monitoring Treatment:** For those already undergoing treatment, the QbTest can help assess the effectiveness of current interventions and guide necessary adjustments.

Preparing for the QbTest

To ensure accurate results, we recommend the following:

- **Arrival:** Please arrive 15 minutes before your scheduled appointment.
- **Avoid Distractions:** Ensure that mobile devices are turned off or set to silent mode during the test.
- **Attire:** Avoid wearing reflective clothing or accessories that may interfere with the motion-tracking equipment.
- **Restroom Use:** Use the restroom before the test, as it cannot be paused once started.
